WORK EXPERIENCE

ServiceNow
Senior UX Researcher — August 2021 to Present
Platform UX (AI-Native Migration)

- *Drove a shift in the 2026 migration roadmap from ROI messaging to risk reduction by leading a mixed-methods adoption study (interviews plus an n=123 decision-maker survey) that found business disruption, not cost, was the top barrier (74% vs. 46%). Synthesized the findings into a binding "Adoption Contract" (P1/P2 conditions) that moved Director+ leadership from a single-path plan to a phased assess-pilot-migrate model.*
- *Led research for a 0-to-1, ambiguous AI-native migration portfolio by setting project-based research plans and running quarterly roadmap reviews across three concurrent studies, turning agentic AI concepts into trustworthy user outcomes.*
- *De-risked trust and discoverability gaps before launch for AI Processing and Citation concepts by running 1:1 prototype interviews, leading to progressive-disclosure changes adopted in the Zurich and Australia releases; co-led a card sort confirming WCAG 2.1 AA compliance.*
- *Opened a new line of research, earning the Craft Excellence Award, by pitching and securing funding for on-site contextual inquiry; co-launched Rolling Research, the org's first cross-BU research collaboration, compressing the release research cycle from two cycles to one.*
- *Cut research turnaround from 6 weeks to 2 and raised consistency across teams by building and mentoring the UX Research org on an AI-assisted workflow (Claude) from planning through synthesis, deciding where AI belonged and where human judgment had to stay.*
- *Justified continued investment in the new interface by co-running a benchmarking study of end-user productivity on Next Experience versus Core UI, using usage data alongside primary research, and rolled it out to all customers.*
- *Gave leadership a longitudinal view of adoption by setting baseline metrics and running a 6-month follow-up survey on customer sentiment; drove persona-based segmentation across all platform studies, including accessibility users for reflow and keyboard-navigation testing.*

NASA Ames Research Center | SJSU Research Foundation
UX Research Intern — April 2021 to May 2021
Advanced Air Mobility Program

- *Shaped design decisions for NASA's Advanced Air Mobility program by co-leading field and usability research on ground-steward interfaces that manage unmanned aircraft traffic; set design and safety benchmarks via literature review, with recommendations adopted by the design team.*

Reltio
UX Research Intern — June 2020 to December 2020

- *Drove the launch of a new Search UI feature that increased productivity rate by 40% of the end users (Data Stewards) by leading competitive research, heuristic evaluation, creating personas, user journey maps and usability testing. Set up baseline benchmark metrics to track performance of the feature in the long run.*
- *Led exploratory research for Profile Interaction Search feature that helped reduce the amount of time Data Stewards spent on understanding the Interaction Data by mapping user journey, creating a storyboard to understand the use case and by conducting interviews with the Data Stewards.*
- *Launched Data Validation Function to question the accuracy of the sources that inject data in Reltio Cloud for Data Configurators that resulted in a 20% increase in the success rate made by Data Configurators by leading heuristic evaluation to evaluate the existing feature, conducting user interviews and usability studies to understand the pain points of the Data Configurators to make changes.*

EDUCATION

Master of Science - Human Factors/Ergonomics (HCI Emphasis) — *2019 - 2021*
San Jose State University

Postgraduate Certificate - Business Psychology — *2017 - 2018*
University of Manchester

Bachelor of Arts - Psychology — *2014 - 2017*
Bangalore University

SKILLS

Research Methods: Interviews, field studies and ethnography, contextual inquiry, concept and prototype testing, usability testing, journey mapping, card sorting, heuristic evaluation, personas, survey design, benchmarking and UXQ metrics.
Quantitative: Regressions, ANOVA/t-tests, survey response effects analysis, behavioral and usage analytics.
Leadership: Stakeholder and executive influence, research strategy and roadmap gating, cross-functional program management, mentorship.
AI and Tools: Claude and Copilot-assisted research workflows, GreatQuestion, Qualtrics, MUIQ, Miro, Dovetail, UserZoom, UserInterviews, R, SPSS.
